

Core atlas: native points and uncertainty · frozen 396-test family

45 traits · 153 historical primary positives + 8 sensitivity positives · printed-precision reproduction

A Global genetic correlation

B Standard error

Dots: BH $q < 0.05$ within all 396 tests. Hatching: historical sensitivity rows.
† All 36 sleep-lipid pairwise outcome intercepts exceed 1.2; scientific clearance remains unresolved.
Marginal 95% intervals and source/QC details are in the complete numerical table; measurement contrasts are untested.
