

Unified sleep genetics evidence · current status

12 original sleep traits; three preserved testing families

Original atlas

$12 \times 33 = 396$ tests

153 primary FDR positives
161 including 8 sensitivity rows

Native replay: 1 / 396 pairs

Phenome extension

$12 \times 100 = 1,200$ tests

603 historical FDR positives

Native replay: 0 / 1,200 pairs

External validation

217 locked candidates

23 qualified outcome-side positives
18 concordant; 17 QC excluded; 159 absent

Native replay: 0 / 41 estimates

18 / 18 checkpoint files recovered exactly · 100 extension + 13 validation inputs receipt-matched

0 completed independent both-trait validations · no new primary biological question admitted

Exact archival recovery and printed-log concordance do not complete native source-to-result reproduction.
