

Figure 4

Local sharing: interim evidence status

Locked sensitivity analysis · current full-family audit · no locus-level inference

LOCKED ANALYSIS

RUNNING · 12 × 2,495

The prespecified Frailty Index × sleep/circadian sensitivity family continues.

Evidence: frozen lock; audit frailty_fi_sleep_java_sensitivity_v1

LATEST FULL-FAMILY AUDIT

27,875/29,940 receipts

Read-only scan 23:49:39–23:50:59 UTC; Receipt inventory or runner count advanced during scanning. Runner count: 27,881.

Evidence: audit completed 2026-09-28

LOCKED 1% TRAIT GATES

FAILED · 12/12

4,810 negative-variance; 252 no-reference-SNP; 4 other. All trait-level lower bounds exceed the frozen 1% allowance; thresholds unchanged.

Evidence: per-trait gate audit; all 12 locked traits

INTERPRETATION

NO LOCAL INFERENCE

4 workers active (6 requested); claims: insomnia locus 211 and longsleeper locus 211. Failed gates do not establish absence of sharing.

Evidence: no receipt, claim, or duplicate-identity issues

Validated 27,875/29,940 (93.1%); integrity issues 0; launch failures 0; stale recoveries 4. The run continues; failed gates prohibit local-sharing inference but do not show sharing is absent.
