

Figure 5

Molecular follow-up: upstream eligibility status

No eligible frailty-specific locus set · resource availability is not locus evidence

FRAILITY-SPECIFIC LOCI

NONE ELIGIBLE

No eligible shared-locus set is available to drive fine-mapping, trait-trait colocalization or downstream molecular queries.

Evidence: analysis/local_sharing_readiness_audit_2026-09-24.md;
analysis/lava_interim_receipt_diagnostic_chronotype_2026-09-24_2352.json

MOLECULAR-QTL RESOURCES

INDEXED · NOT LOCUS-MATCHED

eQTL Catalogue and BrainSCOPE are resource indexes; pQTL objects remain unacquired. No locus-specific QTL integration is reported.

Evidence: manifests/targeted_resource_audit.tsv;
analysis/pqtl_access_recheck_2026-09-24.md

MUSCLE AND CELL RESOURCES

METADATA PARTIAL

HLMA donor/library supplements and muscle-resource indexes exist, but archive identity, donor mapping, build and reuse details remain incomplete.

Evidence: analysis/hlma_processed_data_portal_audit_2026-09-23.md;
manifests/muscle_single_cell_resource_index.tsv

BIOLOGICAL INTERPRETATION

NO GENE / TISSUE CLAIM

There is no eligible locus-to-gene, protein, tissue or cell-type evidence in this package. This status panel reports evidence readiness, not biological absence.

Evidence: analysis/local_sharing_readiness_audit_2026-09-24.md;
analysis/pqtl_access_recheck_2026-09-24.md

No genes, proteins, tissues or cell types are inferred. Reassess only after eligible upstream loci and locus-matched molecular data become available.
